Project Phase 2: Updates, Clarifications, and Suggestions

Note: In cases where this document and the phase 1 or 2 project descriptions disagree, the updates in this document supersede the original details.

Updates
2.21.14.a.

For semantic checking, you may safely ignore our previous rule that comparison operators have no association. There is no need to check this during your semantic checks.

2.21.14.b.

For IR generation, the following updates to Tiger need to be taken into account:
1. Tiger is 0-indexed.
2. For-loop control flow should work as it does in languages like python: The upper-bound is *exclusive*. For example, `for i := 0 to 10` do should execute for i = 0, 1, 2, ..., 9.
